

SPORTTEX

— GERMANY —

The benchmark in rod building

2025

THE SPORTEX CATALOGUE 2025!

Look forward to unique know-how as well as all rod innovations for the coming season.

For more than 75 years, the dynamic fusion of black and **Sportex** Yellow has epitomized raw rod power, narrating countless tales of landing the trophy catch of a lifetime. With a fresh design, we hold fast to our heritage, unarguably retaining our position as **The benchmark in rod building!** Behold the all-new **SPORTEX Collection** – a symphony of premium fishing rods, deluxe and practical rod cases, and meticulously engineered accessories. This assortment not only showcases our innovation prowess but also encapsulates our unwavering passion, fueling every angler's adventure. You can find all products, including all the latest innovations, in great detail at www.sportex.de.

Bursting with additional information about blanks and components. Loaded with a plethora of videos, images, and rod illustrations that reveal every single millimeter! All of this and so much more at www.sportex.de.

Register effortlessly and swiftly online for our 10-Year Blank Warranty and delve into our riveting email newsletter, brimming with heaps of tips and tricks. Discover a **SPORTEX** dealer near you with ease and, if you're curious about our team, get acquainted with each and every member. Explore the realm of possibilities at www.sportex.de!

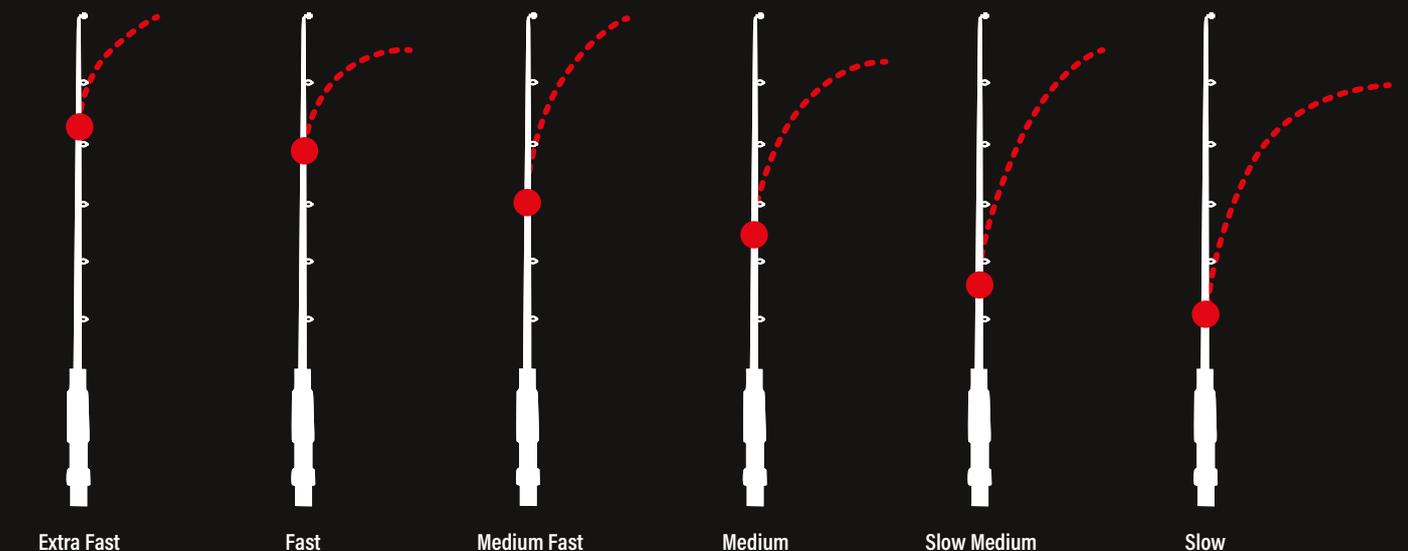

Nothing compares to a SPORTEX rod: Its legendary reputation is owed to unparalleled innovation combined with exceptional technology.

Our products embody absolute reliability, utmost value, and masterful craftsmanship – setting the global standard for over 75 years. Of course, progress never stands still with us, which is why we proudly assert that **SPORTEX** rods have enthralled countless anglers for generations, consistently being The benchmark in rod building. To achieve this, we work passionately every day, utilizing the finest and most innovative materials, profound artisanal skill, and a meticulous eye for detail. And YES: we believe we've once again raised the bar significantly – see for yourself!

Your SPORTEX Team

Rod action

EXTRA FAST ACTION
Extra Fast:
 the blank primarily flexes in the upper third of the tip section. Further down the blank features a strong backbone.
 ■ Sensitive bite detection
 ■ Powerful and long distance casting

FAST ACTION
Fast:
 the entire tip section of the blank flexes. The butt section offers a strong backbone.
 ■ Sensitive bite detection
 ■ Powerful and long distance casting

MEDIUM FAST ACTION
Medium Fast:
 the rod flexes from its tip nearly down to the middle of the blank. The butt section offers a strong backbone
 ■ controlled hook setting even on longer distance
 ■ large distance casting possible

MEDIUM ACTION
Medium:
 the rod flexes from its tip all the way down to the middle of the blank. The butt section offers a strong backbone.
 ■ controlled hook setting even on longer distance
 ■ large distance casting possible

SLOW MEDIUM ACTION
Slow Medium:
 the blank flexes from its tip all the way down to just about the handle section.
 ■ very healthy balance of power and best for fighting large fish
 ■ excellent shock absorption even in close-up range

SLOW ACTION
Slow:
 the entire blank evenly flexes from its tip down to the handle and is quite soft.
 ■ very healthy balance of power and best for fighting large fish
 ■ excellent shock absorption even in close-up range

BEYOND RS-2

PRECISION AND CONTROL AT THE HIGHEST LEVEL!

The Sportex BEYOND RS-2 once again sets new standards in terms of rod technology and design. It is a real powerhouse for predator anglers! The innovative, heptacore blank made from the best T1100 carbon fibres ensures impressive performance and exceptional bite detection. With its 'extra fast' action, powerful backbone and sensitive tip, it offers you maximum precision and control, whether casting, hooking or drilling. Casting accuracy is maximised by the slim and extra-light SEAGUIDE Titanium SIC guides, while the stylish FUJI TVS

reel seat and high-quality, braided carbon split handles* ensure comfort and a classy look. This rod is not only an eye-catcher, but also a reliable partner on the water at all times.

If you are looking for a rod that excites with every cast, fulfils the highest demands and offers reliability, the BEYOND RS-2 is the perfect choice for you. With it you will experience fishing on a new level!

ABSOLUT LEVEL 3

ABSOLUTE SPEED, ABSOLUTELY UNIQUE!

The Absolute series is back and better than ever before. Engineered to epitomise angling excellence, the RS-3 version boasts our exceptional Helicore blank, meticulously woven from T-1100 carbon fibres and enriched with a bespoke epoxy resin. This marriage of materials guarantees extraordinary casting acceleration and a decisive strike impact. Tailored to modern predator fishing's demands, the Absolute Level3 series has the range required for all your angling ambitions. From soft plastics to enticing wobblers, spinnerbaits and beyond, the Absolute Level3 seamlessly integrates with every type of lure. The new Pelagic model, featuring an extended handle section,

and the Sharpshooter model tailored for LiveScope fishing, constitute the pinnacle of precision. Achieving remarkable accuracy, these rods lock onto their targets with unparalleled tautness, ensuring a rock-steady hookset during the critical moments of any fight. These are the ultimate weapons when it comes to tackling big pike and zander. Fittings: Wear-resistant SIC guides in KL / KT style, FUJI TVS or ACS (Baitcast) reel seats and tough EVA Duplon split handles. Available in lengths from 7ft. to 8,7ft. and casting weights from 3g to 125g, these are absolute must-haves.

GRAPHENON RS-2

PERFORMANCE MEETS STYLISH DESIGN.

Experience the next generation of fishing with our Graphenon RS-2 rod series - perfect for ambitious predator anglers looking for top performance and exceptional design.

The super lightweight and extremely durable Helicore blank made from the finest M40X and T1100 carbon combines revolutionary materials for unrivalled stability and durability at a low weight. The Medium Fast+ action ensures first-class casting characteristics and precise bite transmission so that you can savour every moment on the water to the full.

The progressive power development of the blank ensures constant power during the fight, allowing you to handle even hard-fighting fish with confidence at all

times. The rod is equipped with slim original FUJI KW / KL / KT SIC guides, which allow the line to glide perfectly through the guides and ensure optimum heat dissipation.

The innovative, extremely lightweight, one-piece monocoque carbon handle with reel seat not only offers an extremely stylish look, but also has an extremely high conductivity, so that you can feel even the finest bites immediately in your hand.

This spinning rod is more than just a tool - it is a statement of quality and performance. Let yourself be inspired and turn every fishing trip into an extraordinary experience!

HIGH-END PERFORMANCE RIGHT DOWN THE LINE.

Here's the missing piece of the puzzle for all those pike and perch anglers who set their standards high. Anyone looking for the ultimate weapon for taking on predators need look no further; these exceptional rods are the ultimate answer! At the heart of the rod is our super fast and super tough Helicore blank made of T1100 carbon fibres and special epoxy resin. Thanks to their unique combination of FUJI titanium guides, carbon reel seats and carbon grips, Nobun Spin models are extremely light and fit perfectly in the hand. The extra fast action gives that touch of seductive life

to every lure and creates a direct connection with the fish. Whether it's jigging, vertical or lazy (sometimes called sink and draw) fishing, the slightest movement or touch of the lure can be felt from the tip right into the handle. And that means you're the master of the situation, at all times. This power set-up is rounded off by a stellar casting and playing performance, which makes for a spectacular fishing experience every time and everywhere.

UNIQUE SPEED AND SENSITIVITY COME AS STANDARD.

Just like their 'big brothers' in the BEYOND Spin Series, the Revolt Spin rods feature our trailblazing 7-sided Heptacore blank. They also boast maximum possible speed, optimum loading/acceleration, extraordinarily good sensitivity and enormous reserves of power. Proof that they are genetically the same rods as the Beyond Spin models, only with a different configuration. Revolt Spin rods also feature SIC guides (K-Style), a specially finished FUJI TVS reel seat, a removable FUJI hook keeper, and ergonomically designed Duplon handles. All Seatrout models are fitted with a full-cork handle.

TIBORON RS-3

CLASSIC PREDATOR ROD WITH MODERN STYLING.

Traditional qualities and innovative design all in one: when we came to review these well-loved spinning rods, there was no compromising on high-end materials. We treated this already successful series to an upgrade with our high-performance Helicore blank made of T1100 carbon fibre. For an inspirational surface finish, a modified version of the fishscale technology came into play, found in our AIR Spin RS-2 models. The handle section above the FUJI VSS reel seat is also made of tough lightweight 3K carbon. The action of the Tiboron RS-3 has deliberately been made somewhat stiffer than before, so as to meet the demands of modern lure fishing. And the rods are of course ideally suited for everyone who wants to get specimen pike and perch on the line with hard baits, spoons, spinners and the like.

AIR SPIN RS-2

LONG-CASTING MIRACLE WORKER.

Fantastic loading, excellent resetting capacity and unique sensitivity. Anyone who experiences this superb spinning rod in action immediately feels its inherent potential. The newly-developed lightweight Helicore blank made of T1100 carbon fibres and special epoxy resin with innovative nanoparticles makes for maximum agility and stability. Then there's the high-end fittings, including slim FUJI TORZITE guides, specially designed reel seats and high-quality natural cork or Duplon handles. In addition, the handle section contains the tried, trusted and perfected SBS (SPORTEX Balance System), with three different inter-changeable weights. This means the rod

always sits perfectly balanced in the hand for long periods without strain or stress. And the innovative 'Fishscale' blank finish is a treat to see and feel. In short, an absolute dream for hardcore spinning anglers who place particular value on long, accurate casts.

THE RIGHT LOAD FOR A FISHING ROD IN THE DRILL!

The power of a rod lies in the hand section, the tip determines sensitivity, responsiveness and casting characteristics!

Because knowledge simply catches more and more fish, we would like to illustrate how a fishing rod should be loaded correctly and how breakages can be avoided:

You've done it! A fish has taken your bait and you have successfully set the hook. The fight, by far the most exciting part of our fishing trips, begins.

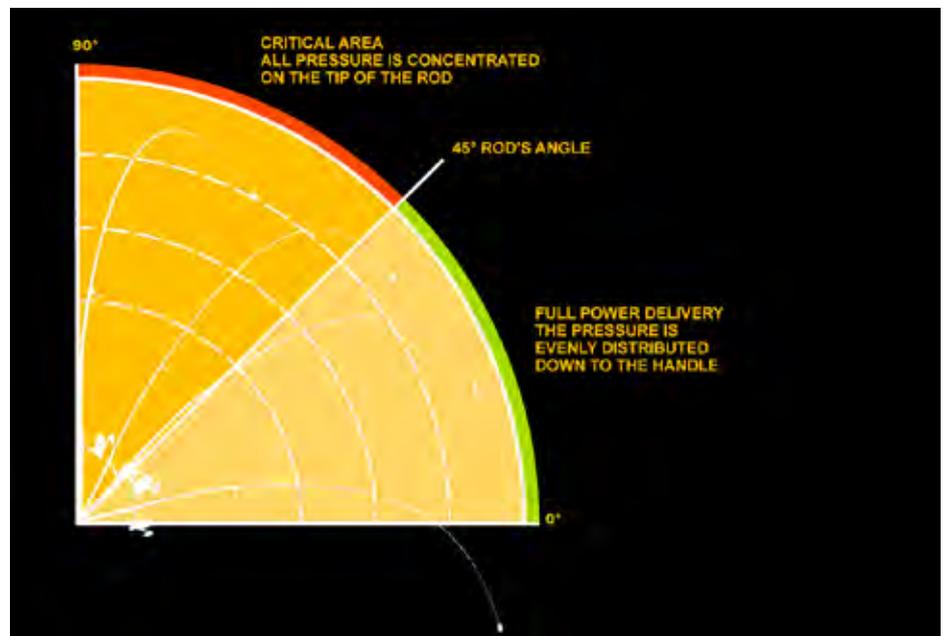

All your skills will be required over the next few minutes, and in very rare cases even hours, to let the potential dream fish slide into the landing net. To ensure that the strong opponent tires quickly, it is best to heed the following tips: depending on the rod action and fighting strength of the fish, you will achieve the best load distribution when the rod is bent right into the hand section and the angle of inclination is below 45 degrees. In this target state, each rod section can optimally fulfil its task.

Tips:

- If you have a 'hanger', hold the rod flat, close the brake and apply tension solely via the line. This prevents the rod from being overloaded or even breaking! You also increase the chance of releasing the hook, as the line exerts the pressure directly on the lure without your rod acting as a spring against it.
- Release the drag during transport: Not only does this protect your drag discs in the long term, but it can also effectively prevent rod breakage. How does this work? Just imagine you get caught with the line, ring or hook of the lure in the boot of the car or in the bank vegetation. In this case, the lightly adjusted drag can release the line - there is no tension that would cause the rod to bend over unintentionally. This is completely different with a hard brake setting!
- Rod section connections should be checked regularly. Even if you plug your rod parts together with precisely measured force, any temperature differences between day and night or high loads can cause the carbon to expand or shrink. This can loosen the connections in the long term, which can lead to breakage.
- The steeper the angle, the less pressure the rod can exert on the fish and the less you make it work for you.
- Remember that your rod is a finely tuned piece of high-performance sports equipment and not a clumsy 'broomstick' on which you can lift your fish out of the water.
- Especially when the dream fish is within reach, many anglers 'instinctively' tend to pull the rod tip behind the head/shoulder and thus position it far too 'steeply'. If a fish that is not fully drilled out then makes a spontaneous escape attempt, this often results in unsightly tip breaks - and the joy turns into the opposite.
- A net or landing net should always be used to land a fish. If you don't have one to hand, it is always worth landing the fish using the leader instead of the rod. Roughly speaking: the tip catches, the hand part drills.

There is a risk on the flip side of optimising the load on the rod: Set the rod angle steeper than 45 degrees, say, and not only will the pulling power and drill power decrease to the extent that the risk of suffering a rod breakage increases. So: Never stretch the rod steeply upwards or even backwards! With extremely strong fish, it can make sense to support the end of the rod at the hip and brace yourself against the fish with the rod in order to increase your power reserves.

BLACK ARROW G4

ARROW-FAST PRECISION RIGHT TO THE TIP

Unleash your fishing potential with our state-of-the-art 4th generation 'Black Arrow'. The lightweight and powerful Helicore blank made of T800 carbon offers outstanding fishing fun and reliability. The 'fast' action of the blank is ideal for use with hard and softbaits and ensures precise lure control and outstanding reaction speed. Due to its impressive speed and excellent casting properties, this series once again provides an aha effect in terms of casting accuracy and range. The rods are equipped with slim SEAGUIDE SIC guides, a 'grippy' ergonomic EVA 'split' rear handle with an aluminium end

cap. In addition, the lacquered FUJI TVS reel seat or the ACS reel seat on baitcast models and the heavy bigbait musky models ensure a secure hold of the reel and a consistent, stylish design. The two 'Street' models also have a telescopic rear handle, which provides additional flexibility when adjusting the length. This predator rod series combines state-of-the-art technology with outstanding design.

CARAT GTS-2

A MODERN ROD JEWEL IN A CLASS OF ITS OWN.

Discover the top class of predator rods with our new, light and powerful CARAT GTS-2, which is equipped with our Helicore blank made of T1100 carbon. The 'fast' action gives the rod exceptional casting dynamics and very fast recovery. Thanks to the excellent sensitivity in the tip area, you are able to perceive every action under water immediately and can therefore return every bite with a quick strike. This rod is also characterised by its first-class damping properties, giving you optimum control and precision during the fight.

To guarantee maximum casting distance and perfect line control, we have equipped the Carat GTS-2 with SEAGUIDE XOG / XQG / XOG-W SIC guides. The innovative, extremely lightweight, one-piece monocoque carbon handle with reel seat not only offers a stylish design, but also has extremely high conductivity so that you never miss a bite again. With this rod, you can master any challenge on the water with absolute ease!

ILLUSION

SPECIALIST EQUIPMENT, NOW FOR EVERYONE!

Introducing an exceptional line-up of rods designed to bring specialised expertise within reach of every angler. With an impressive array of tailored rods, the Illusion series redefines the way you approach predator fishing. Engineered with specially adapted lengths and casting weights, these rods offer impeccable handling, setting the stage for exhilarating encounters. Each blank boasts Japanese high-performance carbon, ensuring an extra fast rod action enriched with the perfect blend of

power and finesse. This makes for outstanding casting performance, as well as for extraordinary reserves of strength when it comes to playing the fish. The Illusion series boasts everything you need to reel in pike, zander, perch and more with complete success. The Sharpshooter model IL2202 is also ideally suited for LiveScope fishing, while the IL1950 also has a Pelagic model with an extra long handle section. The rods are fitted with KW / KL / KT style SIC guides, TVS or ACS style reel seats and tough Camou EVA Duplon split handles.

BLACK PEARL MAXX

THE NEXT CHAPTER OF A LEGEND!

The Black Pearl is an evergreen which has been in the SPORTEX range for decades and is still enjoying huge popularity today. And with the MAXX version the legend enters a new chapter. This series is a winner, with fast, lightweight rods made of hard-wearing Japanese high-performance carbon. It is a broad range of rods which are suitable for all-round use as well as for specialised ultra-light or jig fishing. There is also the choice of three travel models in different lengths for holiday trips. And thanks to the special rod guides, the BP2263 model is also well-suited for use in saltwater. If you are looking for reliable rods with a good price-performance ratio, then the Black Pearl MAXX is just what you need. Fittings: KW / KL / KT style SIC guides, TVS or ACS style reel seats and tough EVA Duplon split handles.

KEV NITRO RS-2

A GENIUS COMBINATION: KEVLAR MEETS HIGH-PERFORMANCE CARBON!

In recent years, the development of high-quality aramide fibres has sparked a revolution in rod construction. These fibres possess unparalleled attributes – extreme tensile strength, lightweight design and resistance to heat – making them the perfect building blocks for superior fishing rods. And now, thanks to the innovative combination of Japanese high-performance carbon and special aramide fibres, we are in a position to create a blank which combines a high loading limit and tremendous speed strength. And the results are unequivocally convincing for all predator

anglers. Imagine the thrill of engaging in a battle with a truly massive fish. The Kev-Nitro RS-2 offers the safety and resilience required when you are faced with a true titan of the water. This rod's progressive power distribution ensures that you are equipped for every twist and turn that the fight brings. The Kev-Nitro is ideally suited for the pursuit of zander and pike, with all conventional lures. And naturally the rod fittings meet all the demands of a modern SPORTEX rod, with SIC guides from Seaguide, FUJI TVS reel seats, and a slim and robust single Duplon handle.

NEOWAVE RS-2

SLIMMER, LIGHTER, FASTER - AND WITH EXTRA SENSITIVITY!

Slim, light, fast and with extreme sensitivity – these highly prized characteristics of the old Neowave have been replicated in the RS-2 version. Much of this is thanks to our Helicore blank, created from T1100 carbon fibres and the new epoxy resin, which makes the slim, lightweight blank even less affected by outside jolts and shocks. Other highlights are the extra light titanium guides, which help to further intensify any generated speed. With the matched medium fast action, trout, perch and similar species swiftly meet their match when you start playing – aided still further by

the strengthened handle section which has been given extra power thanks to the new 3DX-2 carbon mesh used in its construction. Other high-quality fittings include a FUJI TVS reel seat and tough EVA handles.

PREDATOR FISHING IN AUTUMN!

Every season has its own character. In spring, nature comes back to life and anglers look forward to being back on the water after the sometimes long closed seasons. Summer allows us to go after our target fish in T-shirt and shorts, at least as long as the mosquitos don't put a spanner in the works.

However, the last rainy days of summer soon herald the cooler autumn. Our cold-blooded fish notice this immediately and know that it is now time to prepare for the approaching winter. The supposedly big feeding season begins and thus a time when we anglers can expect good chances on the water. We have summarised the most important tips for autumn so that you are successful this time of year.

1. Look for shoals

The colder it gets, the more bait fish such as roach, burbot and co. move closer together. For us, of course, this means that predators also move into the bait fish areas. They can catch a lot of prey here with relatively little energy expenditure. Often these gatherings can still be recognised visually on the surface or, unfortunately, by hunting cormorants. But it's not just the white fish that are gathering now. Perch are also gathering in ever larger numbers as the temperatures gradually get colder. If you catch one now, you should work the spot for longer so that you can possibly outwit several specimens.

2. Larger lures lead to success

In contrast to spring, the fry have not just hatched, but have already grown a few centimetres. In other words, the general prey of predatory fish has become significantly larger. Furthermore, as the water gets colder, pike and co. naturally want to spend less and less effort on their food. They often prefer to attack one larger fish rather than three small ones.

3. Be well dressed

Of course, we are not talking about designer clothes or stylish outfits. Rather, we recommend being prepared for a wide range of weather conditions. October has seen everything from 20 degrees and sunshine to snowfall. An extra rain jacket in the car just in case, or a T-shirt under a jumper, can make or break a long day's fishing. Generally speaking, a change of clothes in the car is never a bad idea. Who hasn't slipped on the bank or fallen off the boat and involuntarily gone for a swim...

4. Fishing into the night sometimes

This is not necessarily the best strategy if you're after perch. Even if this can work in exceptional cases, zander and pike are better target fish in the dark. Zander are extremely intelligent night predators and pike will also find a powerful lure with lots of pressure waves, even in the darkest of nights. The most productive time is often from sunset until around 22:00 or 24:00 at the latest. Of course, you should know your water and the locations of the fish well for night-time spin fishing. Certainly not a tip for everyone, but anyone who has always toyed with the idea should definitely give it a try. It is often the case that the more fishing pressure there is on the water, the better it works.

5. Autumn is not the end...

Even if the cold weather in November and December means the end of the fishing season, it is often worth continuing to spend time on the water during these months. When the smaller specimens reduce their feeding, the larger ones are often still dependent on more reserves. So it's best not to stow away your fishing tackle early.

THE NEW LIGHTWEIGHTS IN SPINNING.

NOVA RS-2 Twitch: Catch success guaranteed! The rods in this completely upgraded series boast improvements in lightness and speed, the attributes that helped make their name. The newly-developed blank was conceived as the optimum answer for successful hunting for trout, perch and similar species. Added to that are a fine, sensitive tip, a rapid action and plenty of damping in the backbone. An absolute top choice for use with hard baits, spinners, spoons or softbaits – and a price-performance ratio that can't be beaten!

NOVA RS-2 Jig: The top choice for bait placement and fish-playing action. Anyone looking for a top rod in light to middle weight spinning will be impressed with this series. The newly-designed blank comes with a fast and somewhat harder tip area, so as to speed up the bait even better. The semi-parabolic action allows for optimum guidance. And the reserves of strength in the backbone allow for a secure and reliable strike. The perfect choice for both still and flowing water.

CURVE RS-2

HOLDS THE LINE, ALL THE WAY THROUGH.

Light, dynamic, and timelessly elegant. When we upgraded this popular series of rods, we used a special and extremely high quality carbon material, which in particular improves resetting speed and acceleration when casting. In addition, the carbon fibres have more tensile strength, which gives the extremely slim blank perceptibly more power reserves in the backbone than previously. This means that specimens can be more easily kept away from obstacles when being played, and can be brought to the net more quickly. Thanks to their lightweight

structure, the rods lie very balanced in the hand, and make for hours of fatigue-free fishing. Among the top quality fittings are a single Duplon handle with VSS reel seat, high-quality SIC guides, and an innovative D-Hook hook keeper from Seaguide. Anyone on the lookout for an inspiring spinning rod with superb medium-fast action need look no further!

GENIUM

A GENIUM ALL-ROUND ROD FOR hardcore predator anglers.

Here is the complete rod for the ambitious spinning angler – with a touch of genius. When we developed the new Genium Spin series, our aim was to provide a spinning rod that was extremely thin, fast and tough. The result is a precision design that makes the pursuit of predator fish with wobblers, soft baits, blinkers or spinners a pure pleasure. The featherweight blank, made of top quality Japanese high-performance carbon, has a fast, semi-parabolic action and excellent loading characteristics that make it a gem to use.

Add to that, impressive casting capacities and immense reserves of power in the backbone, as well as outstandingly good damping ability and extraordinarily high sensitivity, and this rod has everything you could wish for when it comes to guiding the bait and sensing a bite. The technical and visual highlights include an ergonomically-shaped 3K split carbon handle and newly developed, extremely light, high-end carbon guides. All models come fitted with a super robust Seaguide XSS reel seat and the innovative Seaguide 'D-Hook' hook keeper.

HYDRA SPIRIT

A REAL PERFORMANCE MONSTER.

Lightning fast and uncannily powerful, our completely upgraded series now packs even more quality, with a new look and new blank, but still the tried and trusted heritage. Thanks to a uniquely developed highly-modular carbon material, the rod is now even slimmer, but strength and speed have not been sacrificed. A clear, fierce action makes it really difficult for any hooked fish to escape when it's being played. And, of course, when it comes to fine sensitivity and casting capability there's nothing more to ask for. Top-quality fittings include a superbly robust FUJI DPS reel seat, high-quality SIC guides from Seaguide, and an innovative Seaguide D-Hook hook keeper. And best of all, there is a wide range of fantastic models available for every requirement, starting with classic spinning fishing, through twitching and jigging, to trolling. And for all fans of exciting kayak fishing we have a dream come true with the HY2203 version, built to take predators from close up. Time for some monster fun on the water!

RAPID SPIN / DEADBAIT

IT CATCHES THEM ALL, FROM EEL TO PERCH!

Produced with predator fans in mind. Following on from the outstanding success of our Rapid coarse rods, we now want to give all ambitious spin anglers the opportunity to enjoy the pleasures of this inspirational and powerful all-rounder. The top-flight blank, made of Japanese high-modular carbon, has a stiff tip action, and has sufficient power reserves for reliably landing big fish. Adding to that, our cool fish camo design makes the Rapid Spin a visual winner too. And for natural bait enthusiasts we have developed special deadbait versions with casting properties that are pure genius thanks to the way they carry even chunky mouthfuls over great distances. As well as that, this special model has extra large SIC guides for using heavier lines or knots – and for good fishing even at colder times of the year, without any problems with ice.

PERCH FISHING IN THE COLD SEASON!

Contrasts for catching success!

Even if it takes a little longer here and there, autumn and winter will definitely arrive. Low temperatures, rain and generally more uncomfortable than sunny days now characterise our everyday lives and fishing.

Some people have already winterised their fishing tackle and declared the season over. However, this can turn out to be a mistake, especially when targeting perch. They start to gather in shoals in early autumn. They are no longer found in small numbers in many places, but certain spots are now often taken by large numbers of fish. This of course has great advantages, but also disadvantages. The advantage is that if we know the spots, it is often possible to catch several specimens at the same time and they are also very loyal to the location.

In other words, if the weather conditions or the water level (in the river) do not change significantly, you can achieve good results in the same places over several weeks. However, the disadvantage here is obvious: the spots have to be found first. In this article, we would like to tell you how to do this and why the title is 'Contrasts for fishing success'.

The right spot

Let's make one thing clear right away. It is never easy to find these 'perch nests'. Whether from the bank without any aids or from a boat with various electronic devices. A lot of distance has to be fished in order to track down the fish. The first important clue here is the depth of the water. The perch are not shallow, at least not in Germany. Although we often hear this from our neighbouring country Holland, the picture is often different in German waters. The perch retreat to the deeper and calmer areas, as the water is warmer here and the oxygen content suits them better. It is important to the fish that they do not have to expend too much energy on the hunt. In other words, the forage fish should at least be in the vicinity. So if you know where the small forage fish such as burbot, roach or gobies are located, you are already on the right track. Cormorants, which have unfortunately been hanging around in recent years, especially in winter, often give this away. Due to the preference of perch for warmer and oxygen-rich water, the hotspots do not necessarily have to be on edges, sunken trees or similar apparently good spots. Sometimes the fish are now in places that have tended to be less productive all year round. If you pay attention to this, you will be able to pick 'cherries' sooner or later. Those who fish specifically in the river will often find fish in harbours and other quiet areas in winter.

The methods and baits

As we have already mentioned, perch, like all other fish species, are in energy-saving mode in winter. In other words, if possible, they don't want to make a big effort for a successful hunt. When it comes to baiting, this clearly means that slow is the key! And by slow, we really mean extremely slow in some cases. We would like to take a closer look at two very contrasting methods below, which will also explain our title. The first is the Carolina Rig, which allows a very passive presentation of the bait close to the bottom. Secondly, we want to explain fishing with twitchbaits in more detail.

The Carolina Rig

This leader/rig, which can be assembled with just a few small parts and fluorocarbon, is fished with both crayfish imitations and rubber fish. If both are available to the striped predators in the water, you simply have to test what suits their current taste. Some of them are not picky, but especially in winter, they tend to favour one type of food. For us, this means that the bait box often has to be tried out until a catchy bait is found.

Otherwise, the application is relatively simple. Cast it out, let it sink and then retrieve it with regular pauses. You can also drag the lead or bait very slowly over the bottom with the rod tip. Bites from large perch often come especially during the pauses. They love to suck the paused bait off the bottom. Thin lines and sensitive rods help to ensure success here.

Twitchbaits

Now for a stark contrast, the twitchbaits/wobblers. These lures are characterised by the fact that they are guided quite wildly so that they jump from one side to the other at lightning speed. Proper strikes in the rod ensure the zigzag run of the lure. Of course, you might think that this type of fishing is not very successful for sluggish predators. However, if you adapt your style of fishing, this method can work extremely well.

It is important to incorporate long pauses between movements. So if you animate the lure with three to four strokes in summer before waiting a short time, only one 'jerk' may be enough in the cold season. In other words, jerk - pause, jerk - pause, jerk - pause...

As with the Carolina Rig, the bites often come at the moment when the bait pauses motionless. The rods should be slightly flexible for this type of fishing so that the strikes do not hit the lure too hard and cause it to roll over. Subtle jumps from left to right tend to be better in cold water. It is important to mention here that pike are often hooked as by-catch on these lures in particular.

A titanium tip is therefore highly advisable so as not to jeopardise either the fish or the expensive bait.

ADDITIONAL TIP:

You don't need many of the often expensive lures. A shallow plus deep runner in a natural design and the same in more eye-catching patterns are usually sufficient to cover the most common situations. Especially with the eye-catching designs, you should look out for an orange belly, which perch particularly like in winter.

MAGNIFIC FINESSE RS-2

LIGHTNESS MEETS PRECISION.

The ultra-light heliCORE blank of the new Magnific series made from high-end T1100 carbon is light as a feather in your hand and at the same time offers impressive power and casting accuracy.

Fast action for light lures: The action of these rods is perfectly tuned for fishing with small and light lures. Feel every bite, no matter how fine, and present your lures with the best possible lure control.

Exciting casting distances: Achieve incredible distances and place your lures with millimetre precision with the excellent casting dynamics of this rod. You can reach even the most remote hotspots with ease.

FUJI components for smooth performance: High-quality FUJI KL / KT SIC guides and the lacquered FUJI TVS reel seat guarantee a secure hold for your reel and round off the elegant design.

Ergonomic comfort for long fishing sessions: The ergonomic EVA 'split' rear handle with aluminium end cap offers you maximum comfort and a firm grip even after hours of casting.

The Magnific Finesse RS-2 is your upgrade to a finesse fishing pro!

JIG-XPERT

THE LURE CATAPULT WITH NO COMPROMISE

Jig-Xpert: There will be no missed takes with this impressive series of rods. Designed with pike, perch and zander in mind, they cover the entire range of modern active fishing. We have created an ultimate catching machine in all casting weight classes, with real power at your wrist right from the start. The super fast Jig-Xpert blank made of Japanese high-performance carbon has outstandingly good casting properties for precise presentation, even at extreme distances.

Jig-Xpert Perch: There are a lot of different methods for bringing our red-finned friends to where we want them. Anyone who particularly wants to try their luck with small twitch wobblers, Carolina rigs, soft lures and the like will be on to a sure thing with the models in the Perch series. Fantastically fine sensitivity in the tip area really sets these models apart. No matter how cautious the nibble, it can be identified in a flash, and then comes the strike. The longer versions in particular feature an enormously wide range of use, and really earn the title of a true all-rounder. The ultimate tool for hunting stripy predators.

Jig-Xpert Zander: No other fish is targeted more often with the jig lazy or vertical

method than the zander. Perfect contact with the bait, and that sensation of the classic 'tock' when it hits the bottom; these are the keys to success. We designed the blank for this series to be just as finely sensitive and ready to respond. The extra stiff action of the rods lets you feel every structure under the water, however small it may be, and then lets you strike precisely, even over long distances.

Jig-Xpert Pike: Soft lures, wobblers, swim baits and blinkers... just some of the lures used in modern pike fishing. But not all the options can be covered by one rod, and the more specialised the lure is, the better the rod needs to be adjusted to it. Regardless of whether this involves vertical fishing or classic pike jigging, everybody will be happy with this series of rods. There's plenty of power at the tip so as to put the hook exactly in the right place. Combined with a stiff spine, it puts you in the driving seat when it comes to playing the fish. As well as that, these no-compromise power packages have top flight fittings in the form of high quality SIC guides in the KL/KT style, solid TVS or ACS reel seats, and robust split Duplon handles. Just genius!

HUCHEN DE LUX XT

THIS POWERFUL ROD SERIES IS DESIGNED FOR BIG FISH ANGLERS.

The blank incorporates the tried and trusted SPORTEX HT cross-winding technology, which provides improved stability and rapid reset performance. The rods are fitted with best quality, natural cork handles, along with extra large and stable guides that prevent problems with ring icing in the winter.

The tip action allows for controlled bait presentation in the current, as well as penetrating strikes into the very hard mouths of Danube salmon. Thanks to the weight integrated in the handle section, the rod is perfectly balanced and easy to handle. The rod can also be used for heavy pike.

TROWLER

TROLLING MADE EASY.

This is great fun for all large pike hunters. We developed this small but fine quality series of rods together with the Austrian specialists in lures and trolling, Mard Reap Fishing. The slim and fast blanks of these special sideplaner-rods were configured in the tip area in such a way that unintentional releasing of the line clip is prevented as much as possible. Thanks to the robust backbone, the strike can be set perfectly well. And these power-packs are of course also superbly suited for casting with big baits of all kinds. The guide arrangement on the 2.25m version has been designed so that a fixed spool reel or multiplier can be fitted. It also includes a gimbal with a rubber cap. The two 2.65m models are only fitted with a rubber butt cap (no gimbal). As well as this, all three rod variants come with high-quality Seaguide SIC guides, super-robust ALPS DPS reel seats and innovative D-Hook hook keepers. The Big Mamas are going to have to dress up warm!

LAKS

EVERY ONE A WINNER.

Worth their weight in gold for all salmon hunters. This exclusive series of rods was developed especially for lightweight spin fishing for Atlantic salmon. The super fine and sensitive blank made of Japanese high-performance carbon conveys the bait activity directly into the handle. This means that any kinds of spinners, blinkers and wobblers can be guided perfectly. The parabolic action, in combination with a solid backbone, always provides sufficient power reserves during playing to fully absorb even the most aggressive struggles of fighting Salmonids. Among the top-quality fittings are a robust FUJI DPS reel seat, high quality SIC guides from Seaguide and an elegant 4A split cork grip handles. And, of course, these power rods also give nothing away when it comes to successfully stalking sea trout.

SPEED MEETS ELEGANCE!

Experience the perfect combination of speed, elegance, strength and reliability with this exceptional series of rods. These exclusive rods are true works of genius, developed to provide an incomparable fishing experience. The speed of this series is quite simply breathtaking. Their lightweight but tough design ensures long and precise casts, and the strength of the T1100 blank is remarkable. With strength and resilience fusing to perfection, each cast becomes an art as the bait finds its mark effortlessly, while the fast and sensitive tip signals the smallest of vibrations, keeping you in control as you play the fish. At the core of the Rival series is an unwavering commitment to reliability. You can rely on them never letting you down, even under extreme conditions. Behold too the elegance of the Rival's slim profile, meticulous craftsmanship and the exquisite materials chosen for its creation. The renowned FUJI SIC guides, FUJI VSS reel seats and the supple EVA split handles converge to form an aesthetic marvel that resonates with your discerning taste.

PREDATOR LANDING NETS

QUALITY, THAT NETS THEM ALL.

- supersized predator landing net in highest premium quality
- extra solid pole and frame made from aluminium
- 3 hoop sizes available: 60x50cm | 70x60cm | 80x70cm
- extra power handle to guide even biggest catches safely into the net – must try from boat
- handle extends and shortens in one simple action
- folds away with a swift and robust mechanism for clever storage
- knotless, low-odour, rubberized conservation netting
- soft rubber grips
- classy Sportex design

Additional Monster landing net

- size: 95x86cm
- extra large, rubberized mesh
- extra deep (100cm/3,3ft)
- handle middle-section made from 3k carbon
- not foldable but retractable

Monster landing net

SEATROUT XPERT

THE GOLD STANDARD FOR PEOPLE WHO CHASE THE SEA TROUT.

Allow us to introduce a complete top-of-the-range rod series for the fish of a thousand casts. So as to present shy sea trout with different kinds of lures effectively at long range, the action of the lightweight finely-tuned blank has been especially matched for use with wobblers, blinkers and soft plastics. Thanks to the sensitive tip area, in combination with a powerful backbone, every strike connects securely and with full force. Anyone who prefers small blinkers and wobblers of between 8g and 14g will be well advised to go for the two seatrout finesse models. And for those who prefer hunting silver-barred types with Sbirolino, streamers or flies, we recommend the Sbiro version, at 3.6m in length. As well as these, two baitcast models and an ultra-light variant are also available. The top of the range fittings for the Seatrout Xpert include resilient K-Style SIC guides, a robust FUJI DPS/ACS reel seat and a high quality Duplon handle.

YOUNGSTAR NT

THE „FIRST“ FOR THE YOUNGER GENERATION!

The popular SPORTEX entry-level rod for the next generation. These spin rods have been developed especially for young anglers. To make overall handling easier, the back handle has been made shorter and a smaller reel seat put in place. And a lower proportion of glass in the high-modulus carbon provides the blank with higher resilience. The Youngstar boasts lightness, speed and toughness. And while it meets all their particular requirements of young anglers, it's also great for adults going after perch, trout etc.

Youngstar NT

COREGONUM

THE BIG HUNT FOR WHITEFISH STARTS HERE.

When we were developing these two precision rods for successful whitefish fishing, we put the focus on creating extremely light, fast and sensitive models. This was why we used Japanese high-performance carbon for the blank, which allows for extreme loading and enormous speed, so as to be able to make a lightning-fast strike at any moment. Plus, the rods have the power needed to hold even fierce fighters, like char and sea trout, securely on the line. The top quality fittings include extremely light Minima guides, high quality cork handles and a robust DPS reel seat for the 2.1-metre version, or a slide reel seat for the 2.4-metre version for using a fixed spool reel or 'Wenderolle'. As well as this, the rods come with two extremely sensitive carbon fibre exchangeable tips, guaranteed to signal every bite. Every salmonid fisher's dream!

Coregonum

REVOLT CARP

UNIQUE SPEED AND SENSITIVITY COME AS STANDARD.

The little sister of Beyond Carp, the Revolt Carp also features our great heptagonal heptacore blank – together with the same outstanding abilities including optimal loading, fantastic casting dynamics and enormous power reserves. You'll find yourself reaching swims you never imagined. And when it comes to the fight, this 'power rod' fully exploits its ingenious damping properties, meaning the fish gets tired quickly and won't slip away easily. Additional special features include an ergonomically designed Duplon handle, specially painted FUJI TVS reel seat, and slim SIC rings in KW style with a 50 start-guide and removable FUJI hook eyelet. The Beyond Carp is also available as a 10ft stalker version in 2.75lbs or 3lbs with a 30 start-guide. In short: everything you need for successful carp fishing.

ESCALADE CARP

THE LAST WORD IN CARP ROD DESIGN.

More acceleration, more casting distance, more precision: this exclusive carp rod series sets new standards! Ultimate power comes from our heptagonal Heptacore blank, optimised with T1100 carbon fibres. Added to this are high-quality KW/KL guides with SIC inlay. In order to give even more dynamic power to the tip area, extremely light single-leg guides are used, apart from the 50mm start guide and the lowermost guide, both of which have a double leg. And to achieve the optimum balance between rod and reel, we use a DPS double hood reel seat from FUJI. This allows the centre of balance of the reel to be moved forwards or towards the rear, which adds a few additional metres when casting. In short, this is absolutely the last word for everyone who wants to fish at a distance but still be right on target. Just try it out, and be ready to be seduced.

AT EYE LEVEL!

By Michael Kleindorfer

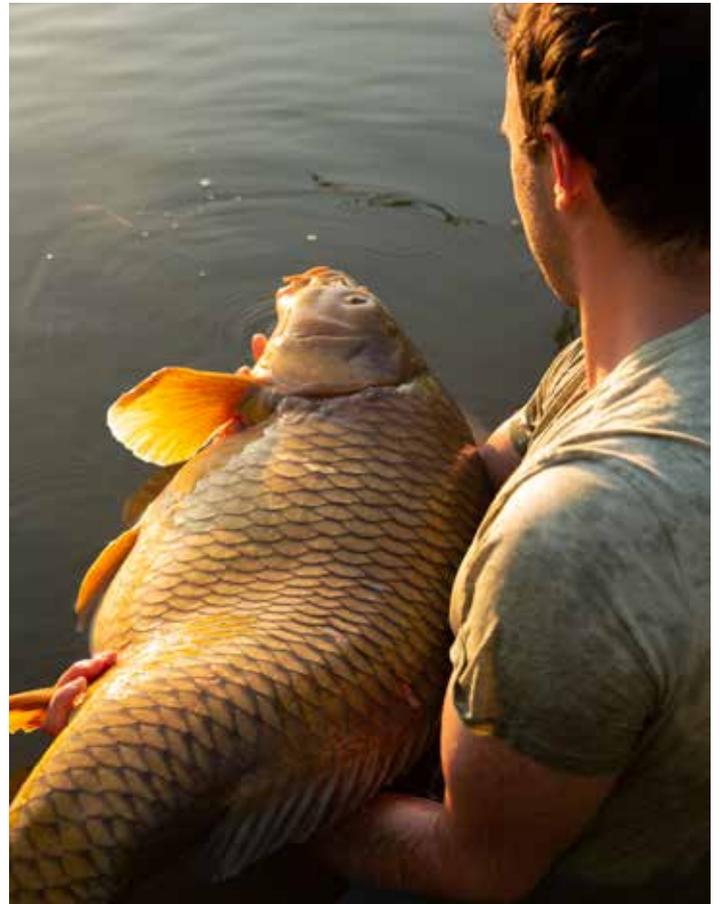

Sometimes things just don't work out. You can do whatever you want, but somehow nothing works out as planned. That's exactly what happened to me! In spring, all sorts of little things kept me away from the water and I rarely made it out fishing. Later on, I had the time again, but just couldn't really get into the year. Despite a few nights out, the result was more than manageable and I racked my brains as to what could be the reason. As lost self-confidence and doubt were never the best ingredients for success, the more I thought and questioned things, the worse things went. A real downward spiral! But several times in the past, it was precisely those moments when I would have liked to have thrown everything away that were followed by something special. So I kept brooding, spent even more nights out and secretly hoped for a miracle or at least some luck that would steer me back on the right track.

When the sun once again waked me at 5 a.m. due to the short nights and no more bream or tench seemed to be interested in my bait, I slowly accepted my fate. The hot weather, the clear nights and the constantly high air pressure heralded the arrival of summer and were certainly not the best conditions for maximum success. Despite everything, I decided to stay another night, because why not? It couldn't get any worse anyway! At least the mosquitoes were really active. However, as I did not want to invest any additional holiday time and the sunny weather would certainly attract one or two bathers, I decided to take the day off and work on my laptop instead. Maybe the next night would bring the turnaround I had hoped for.

After the work was done and with the prospect of another blank night, I wanted to walk around the lake to stretch my legs. As an angler, you do this with polarised glasses of course, there's always something interesting to see. As well as a small pike close to the reeds, I also found a few white fish flitting around the shore. In a shallow bay, I also spotted a few schools of small carp moving around just below the surface, presumably gathering to spawn. It couldn't be long now before spring would finally be replaced by summer. Just a short distance away, I spotted another group of carp, but they obviously had other things on their minds: Eating! Just a few metres from the bank in waist-deep water, four fish ploughed through the sediment. These included

two beautiful scaly fish weighing an estimated 15-17kg, a mirror with a good 20kg and an absolute giant of a scaly carp. I was petrified when I saw how it calmly moved around to examine the stones and mud for food. When it turned away, I could see the full dimensions of the fish. Not only was it long, but it was also incredibly wide and had a prominent pot belly. An absolutely impressive animal! Again and again, the fish came right up to the shore, then turned away and disappeared into the deep water, only to approach again a little later from a different spot. Fascinated, I followed the action from a safe distance and with some cover. After watching for a while, the question finally occurred to me: Would it be possible to catch the fish? Would I scare them off immediately if I approached or something touched the water? I decided to at least give it a try. The sun was already low and I knew that the window of opportunity for

the fish to be here was slowly closing. They wouldn't be here for long and the increasingly long pauses in which they stayed in the deep water were a clear indication of this.

I sprinted back to the car, threw the most necessary items into the large unhooking mat and made my way back to the water as quickly as possible with the oversized carrier bag. When I arrived at the spot, I realised they were still there! But what would be the best way to go about it? How could I outwit one? How could I outwit HIM? Because secretly I didn't want to catch just any fish, I wanted to catch HIM, the huge scaly. How could I pick him out of the group? Would I even be able to catch one of the fish? Things were going rather badly for me at the moment. So perhaps I should consider myself lucky with every success. Nevertheless, I could try to do everything I could to perhaps be lucky enough to catch that one fish. Consequently, I did everything I could to match its behaviour as closely as possible. I put a single 20mm liver boilie on the hair, which was barely distinguishable from the background in terms of colour, so as not to arouse any suspicion. I also shortened my leader by 5cm, as the fish was searching the bottom intensively, but hardly moved when it seemed to have come across something edible. It was also noticeable that all four fish always moved together from the deeper water into the shallows, but the other fish had searched an area relatively quickly and were already retreating again. The big fish seemed to be more dominant than the others when it came to feeding, searched longer and also came closer to the bank. I wanted to capitalise on this and put all my eggs in one basket. So I waited until the fish seemed to have largely searched a strip of bank and only two carp were still actively searching, including my chosen target fish. When they turned a few metres towards the middle of the lake again, I carefully crept a few steps closer to the bank and si-

lently placed my rig directly under the rod tip. The lure was now less than two metres from the bank in less than half a metre of water. I left the line very slack so that it could sink completely to the bottom and finally placed the rod in front of me with the drag open. I didn't even think about a second rod, the risk of spooking the fish was too great. Could something like this work? Even as I was sitting in the grass thinking this, the huge fish reappeared from the depths of the water, accompanied by one of the smaller scup. Its body mass was no accident and it was still eagerly searching the bottom. As both approached my bait, my breath caught in my throat. They were now supposedly directly above the lure and seemed to be lowering their heads downwards. However, the colour of my lure was so inconspicuous that not even I could see exactly where it was between the fish. I knew I only had this one chance. No matter which fish I hooked, the spook would be over and the spot would be empty. Shortly afterwards, however, the fish slowly turned away again and I could see the full width of the big scaly once more. What a fish! Very slowly and with powerful strokes, it swam away from the spot. Damn! That was it, the one chance! It would have been too good to see such a coup after the dry spell. It would have been too good to have such a coup after the dry spell.

It was even more annoying that none of the fish had hooked themselves, even though they were feeding right next to my bait. Maybe they had noticed something after all or maybe my rig was the problem? Still feeling sorry for myself, I saw out of the corner of my eye that another fish was approaching from the right. As soon as I recognised it, it was already right by my bait, tur-

ned and suddenly froze. A few wild headbutts followed and the fish shot away. I immediately looked at my reel. Absolute silence. For a fraction of a second, absolutely nothing happened, then the line was hastily pulled down metre by metre. It had worked! I immediately picked up the rod and gently slowed down the fish, which naturally tried to get away first. After an initial flurry, it now calmly made its way along the bank. I couldn't see exactly which fish had hooked itself, everything happened so quickly and seemed somehow unreal. But I guessed it was one of the two smaller scup.

The strike behaviour also indicated this and the fish was soon back near the bank. This time, however, rather involuntarily. However, when a huge head suddenly broke through the water and a huge mass of fish turned under the surface, I knew it wasn't the small scamp! It's him! I've got him! A little later, I was finally able to pull the huge scaly carp over the edge of the landing net and had to make an effort to get it all the way in despite the actually large net. He seemed to be just as surprised as I was. Once in the landing net, I realised how big it really was. It left the 25kg I had hoped for far behind and the scales levelled out at just over 30kg. In the setting sun, we captured this moment with the camera in the most beautiful light. The fish never left the water and I stood exactly where the fish had bitten in the photos, wearing shorts and barefoot. In knee-deep water, less than two metres from the shore. The evening sun was shining on my face. What a moment! What an experience! Fishing will always be something magical....

THE POWERHOUSE OF POWER AND PRECISION!

Curtain up for the 2nd generation of the BEYOND Carp series!

The innovative, heptacore blank made of T1100 high-performance carbon fibre shines with its outstanding stability and performance. The BEYOND rods are characterised by excellent damping and accurate casting properties.

Thanks to the special blank design, you can reach significantly greater distances with considerably less effort.

To further increase the tensile strength and power during the fight, the handle section has been reinforced with a special carbon mesh. High-quality FUJI KW SIC guides with starting guide size 50 for the 12ft. & 13ft. variants and size 40 for the 10ft. Variants allow the line to glide through smoothly. A specially designed aluminium DPS reel seat with FUJI Double-Hoods guarantee a firm hold of the reel. This also allows the reel's centre of gravity to be shifted slightly forwards or backwards for even better balance.

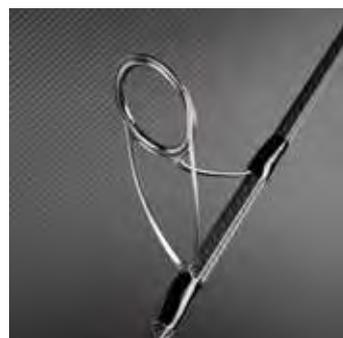

The carbon design split handles not only offer an elegant look, but also a good grip when casting. With this high-end carp rod, you are ideally equipped to manoeuvre large carp safely out of the underwater jungle.

Experience the perfect blend of power, precision and style.

GRAPHENON CARP CS-2

TECHNOLOGICAL EXCELLENCE AND TRADITIONAL CRAFTSMANSHIP COMBINED.

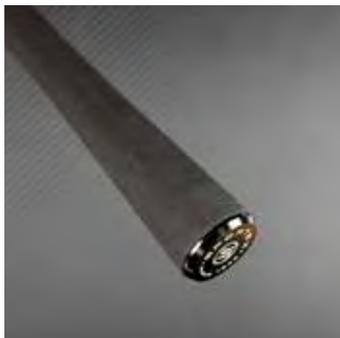

The Graphenon Carp CS-2 offers an excellent combination of advanced material technology and elegant design. The extremely durable Helicore blank made of M40X and T1100 carbon combines revolutionary materials for unrivalled agility and durability. Impressive acceleration values when casting and enormous tensile strength in the hand section make the rods an indispensable tool when it comes to the really 'big ones'. The Graphenon CS-2 really comes into its own in the fight and makes the hooked fish despair at its excellent damping properties. The rod series is equipped with FUJI KW SIC guides (starting guide size 50 for the 12ft and 13ft models and size 40 for the 10ft models), as well as a lacquered FUJI TVS reel seat. An extra slim, full-length and anti-slip 'full-shrink' rear handle ensures optimum grip when casting and a special look on the pod. Discover this incredibly slim rod series - a perfect symbiosis of technology and aesthetics!

INVICTUS CARP CS-2

THE ULTIMATE POWER PACKAGE!

Introducing the Invictus CS-2, built upon the proven Catapult CS-4 blank, fine-tuned for enhanced casting power. The handle section gains strength from a new carbon mesh, adding around 13% more durability. For improved casting performance, the 10ft and 12ft models (up to 3.25lbs) feature lightweight Minima rod guides, reducing blank movement for more accurate casts. For the 12ft, 3.75lbs and all 13ft models, Seaguide's slim and heat-resistant SIC guides are employed. All models up to the 'Boat' versions feature a 50 start guide ('Boat' 30).

The handle section includes a FUJI TVS reel seat and an extra slim, non-slip full-shrink cover.

D.N.A. CS-3 CARP

AT Ti Forged AIR guides

ALPS AWF Alu reel seat

HIGH-TECH CARP ROD THAT CREATES PASSION.

Made from powerful Japanese high-performance carbon fibre, the blank offers excellent high-speed properties. The D.N.A. CS-3 has an unrivalled combination of speed and high resilience. This is achieved, among other things, by a continuous special 1K carbon mesh, which is arranged at a 45° degree angle and ensures increased tensile strength.

This construction ensures long and accurate casts, even in the most demanding conditions. Of course, the rods also have very modern features such as a black matt aluminium reel seat from ALPS, extra slim and lightweight matt black 'Minima' KW guides from American Tackle (size 50 starting guides) and an extra slim, continuous and non-slip 'full-shrink' rear handle.

Whether on a large lake or river, the D.N.A. CS-3 is versatile and impresses in every situation. Its elegant design and first-class workmanship make it the ideal choice for any angler who doesn't want to compromise.

MORION STALKER

Fuji reel seat

GIVE CARP NO PEACE.

These top-quality stalker models in different designs and casting weights pack everything you need for taking on carp. The newly-designed blank made of Japanese high-performance carbon with advanced X-Wrap technology has enormous power, and despite its compact length, it produces impressive casting distances. Thanks to the progressive action, excellent damping characteristics are part of the package, which make for considerably fewer lost fish. The two „Breakout“ models have identical actions to our two-piece rods and, thanks to their telescopic handles, are easy to transport. Among the top class fittings are a single cork handle, high-quality Seaguide SIC guides and a stable FUJI DPS reel seat. Perfect for the bank or the boat.

COMPETITION CS-5

CARP RODS FOR EVERY SITUATION!

Use our Competition Carp CS-5 rods to discover the world of carp fishing thanks to their exceptional combination of speed, resistance and impressive damping properties. The semi-parabolic blank made of Japanese high-performance carbon is fast, and at the same time incredibly tough. You will always have the upper hand when playing even energetic fish. The fast and strong backbones of these rods also allow you to make really precise casts, regardless of whether you are seeking distance or want to cast precisely onto a chosen spot. As well as their

impressive performance, the Competition CS-5 series also feature modern aesthetics and come with top-of-the-range fittings including tough SIC guides in KW style (start guide size 50 / with 10ft Stalker / 10ft Breakout size 40), TVS style reel seats and EVA split handle.

COMPETITION CS-5 CARP MINIMA

Competition CS-5 Carp Minima

The Competition Minima series has the same blank and the same action as the Competition CS-5 Carp. In the Minima version, only the conventional KW guides have been replaced by elegant, slim and particularly lightweight 'Minima' KW guides in a matt black colour from American Tackle.

In addition to the visual enhancement, this also gives the rods a small improvement in the acceleration values when casting.

A MUST-HAVE FOR DEMANDING CARP ANGLERS.

The third generation of the FBC Series has all those special qualities that make a winner. Our latest Helicore blank, based on nanocarbon fibres with extraordinary tensile strength, makes for really outstanding resistance for playing fish and casting dynamics. The special interweaving of the fibres achieves material loading some 20 per cent higher than its predecessor. Thanks to the unique combination of the finest nanoparticles with a special epoxy resin, extraordinary power can be generated that gets the heart pumping at every cast. The progressive action when playing fish rapidly takes even big specimens to their limits and has them sliding into the landing net. All the rods up to the Stalker model come with a SIC guide arrangement, with a size 50 start guide from Seaguide, and tough Duplon handles.

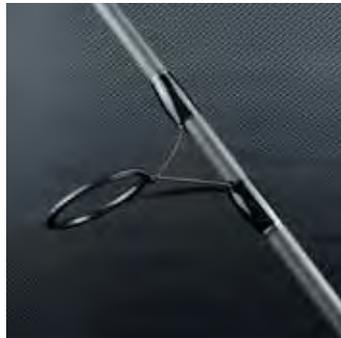

The angular design of the DPS aluminium reel seat and the 1K carbon mesh surface material will also catch the eye on the bank. An absolute highlight for carp anglers who only want the best.

ADVANCER CARP CS-2

OUR PRICE-PERFORMANCE MONSTER!

A hot longstanding favourite for cool conditions: our unique anniversary rod has nailed down a place in the pantheon of modern SPORTEX rods. We have remained true to trusted techniques and kept the focus on classic design, in conjunction with minimalist colour tones and high quality fittings. A powerful blank of Japanese high-performance carbon ensures optimum loading and damping properties. And to guarantee even more power, the handle has been reinforced with a special 3K carbon matte fibre. Last but not least, the Advancer Carp CS-2 comes with slim SIC

guides and a robust Duplon split handle. The ultimate choice for every carp fan who's looking for great fishing tackle on a slimline budget.

TOURON CARP

TWO RODS IN ONE!

The Touron Carp Series are four-piece rods ideal for carrying in a backpack or a small case. But despite the multiple sections, there really is nothing to differentiate between their action and that of a two-piece rod. They have comparable casting and damping properties, and they also have plenty of power reserves in the spine. Another special feature is that you can fish the Touron Carp in two different lengths. The 12ft model, if the last part but one is removed, can also be used as a 9ft stalker/boat rod.

The 13ft model can be used as a 10ft version. It means you have two rods in one. The rods have slim SIC guides from Seaguide (butt guide size 50), a full EVA handle and FUJI DPS reel seat.

CW°/lbs	3,00	3,25	3,75	3,75

TRIUMPH CARP

THE RIGHT RODS FOR THE JOB WHEN LONG CASTING IS THE ORDER OF THE DAY.

We developed these rods in co-operation with our partners in Eastern Europe where fishing from boats is largely prohibited. With the most productive spots often a long way out, rods with a lot of casting strength are needed. Every metre counts. The same goes for international competitions. The Triumph Carp series meets these requirements with flying colours. The blank, of Japanese high-performance carbon, has enormous power in the spine; and the tip has sufficient damping properties to ensure the fish you're playing with doesn't easily get away. Casting tests up to now have achieved distances of up to 220 metres. The rods are fitted with SIC "K-Style" guides (butt guide size 50), a FUJI DPS reel seat and tough Duplon handles. A semi-transparent 1K mesh surface finish gives a superb appearance to the blank.

Triumph Carp

CATAPULT CS-4

OVERCOMES EVERY CARP.

Take what's good and make it even better. That was what we were aiming for when we updated the successful Catapult series. To make sure the modified rods took best advantage of their predecessors' classic strengths, in particular when it comes to casting performance, we decided on a blank made of Japanese high-performance carbon, with a semi-parabolic action. Thanks to the combination of high-quality SIC guides, robust FUJI DPS reel seats, and solid split handle handles, the Catapult Carp CS-4 models have outstandingly good casting and loading

properties. And, best of all, because slight errors in technique are compensated for by the excellent material, even inexperienced casters can achieve impressive results. In short, an all-round no-nonsense package which, thanks to its handle section being reinforced with spiral carbon, can overpower any carp

PARAGON CARP CS-2

THE ULTIMATE FIGHTING ROD.

Every fight a highlight! That's how it feels with these rods. Thanks to their classic parabolic action, they are ideally suited for top results when fishing for carp, both big and small. The new blank - made of Japanese high-performance carbon with innovative X-Wrap technology - has exceptional damping characteristics thanks to its softer action. This makes playing even the toughest carp or big tench a

whole lot of fun. Plus... they don't slip away that easily. Even specimen fish can be brought under control with ease and made to tire rapidly. A fantastic choice for classic carp lakes and other hotspots. Available with either a classic cork or slip-resistant Duplon handle.

EXPERIENCE POWER AND PRECISION!

Experience the ultimate in carp fishing performance with our revolutionary Purista CGC. Developed for carp anglers who are looking for both speed and dynamism, this rod sets new standards when it comes to performance and casting distance. The enormously fast action makes it easy to cast precisely and powerfully over long distances. The special laying of the carbon fibres at a 45° angle means that the blank has even higher tensile strength, while the extra light and tough carbon guides keep weight down and improve the snaking behaviour of the blank. The slim full Duplon handle sits perfectly in the hand when casting and provides a comfortable and firm grip when playing the fish.

CAST FURTHER - MORE FISH!

Video on
YouTube

Sportex rod owners can breathe a sigh of relief when the boat and feeding boat have to stay at home, bank fishing is unsuccessful and the fish-rich spots are a long way away. Long distances are no problem with our carp rods and yet the challenge of successfully achieving long casting distances is great. We have put together a few practical tips to help you make more casts and be much more successful.

The optimum rod length

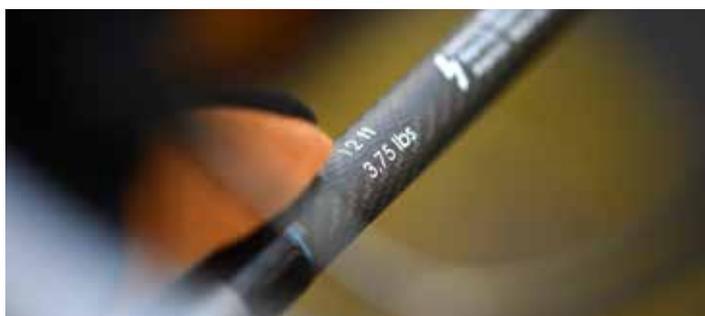

Carp rods with a length of 12 ft. are among the classics. To get significantly more out of your casts, you can switch to the slightly longer 13 ft. variant. The significantly longer lever arm accelerates the lead and the rig more, allowing you to cast a few metres further in the end.

A good casting technique

The right technique is crucial for converting your muscle power into acceleration. Extend your arms, lift your front leg and take a step forwards during the casting movement to convert all your strength into casting distance. Practise as often as possible and improve your throwing technique. Practice makes perfect!

The right test curve

Distance rods usually have test curves between 3.5-3.75 lbs. With the significantly tighter action and faster recovery, you will achieve further and more accurate casts! Our Sportex carp rods now offer special 3-5 oz. Distance versions, which are available in many rod series. We particularly recommend these to long distance casters and distance professionals.

The right lead shape

The further you want to cast, the more important the details become. We recommend lead shapes such as Distance, Heli Square Pear or other aerodynamically optimised versions. Experience has shown that the ideal lead weights for long casts are between 100 and 140 grams.

The right line

Coordinate your setup in terms of line too. A thin braided line or thin monofilament lines are ideal for long distance casts. Thinner line diameters generate significantly less friction in the rod rings and reduce the air resistance of the line when casting. For example, diameters of 0.18 mm are suitable for braided lines and 0.28 mm for monofilament main lines.

The long cast booster

In the end, it is important to pay attention to the details. We recommend treating monofilament lines with Greased Lightning for optimisation and additional casting metres. The Kryston agent creates the effect of reducing the friction of the main line. A cool side effect of its use is the increased abrasion resistance.

Be careful with violent casts!

Be careful and protect your fingers when casting with force. We recommend a leather finger guard for both braided and monofilament lines. They generate even more force with the finger guard and protect your fingers from injury

MYSTIX TROUT RS-2

FAST AND ULTRA-LIGHT FOR TROUT.

Our ultra-modern rod series, specially developed for demanding 'trout area' fishing. The ultra-light and powerful Helicore blank made from T1100 carbon ensures maximum sensitivity and reaction speed. This extra sensitive rod series is perfectly tuned for use with the smallest plugs, spoons and soft lures in running and still waters. Every lure movement is transmitted precisely so that you can immediately feel and react to even the finest bites. The progressive power distribution of the backbone allows even large trout to quickly reach their limits. The casting performance also leaves nothing to be desired thanks to the outstanding speed of the blank. Slim, high-standing FUJI AT - SIC guides prevent the wet line from 'sticking' to the blank. A high-quality carbon DPS reel seat with FUJI hoods ensures a secure and durable hold of the reel.

This fishing rod combines innovative materials and state-of-the-art technology to offer you the best trout fishing experience.

XCLUSIVE TROUT

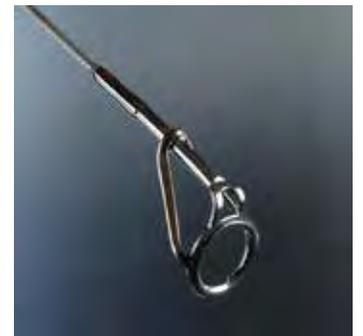

A REAL MAGNET FOR SALMONIDS.

Trout keep hanging on there - it doesn't matter what goes in the water, float, Spiolino, small artificial lures or Hegene techniques, these top-of-the-range rods cover a wide range of modern trout fishing.

The slim lightweight blank, made of Japanese high-performance carbon, is amazingly sensitive and transfers every bite directly. And thanks to the powerful spine, every fish on the hook is under control in a flash. Added to that are top-of-the-range fittings, including a 3A natural cork handle, FUJI DPS reel seats, and special extra light low-friction guides.

Xclusive Trout

L°/cm	330	360	390
CW°/g	10-30	10-30	10-30

X-ACT TROUT

SUPERLIGHT TROUT TAMER.

Our lightweight answer to the needs of the purist in pursuit of trout, char, perch and similar species. To prevent any interruption in the outstanding performance of the blank, which is made of Japanese high-performance carbon, all non-essential fittings have been avoided. This ensures sensitive bite transfer that is absolutely unequalled. No matter how slight the contact with the bait, it gets passed immediately to the handle section. This makes for a faster strike, which in turn means a noticeably better catch quota. In addition, the acutely sensitive tip also conveys every movement of the blinker, spinner or wobbler. That means no more worries about whether the bait is running properly – you can simply feel it! The perfect balance of the rod lets you fish for hour after hour without any sign of tiring. Top quality features include a robust SKS-style reel seat and high performance KL/KT-style SIC guides. The absolute benchmark for anyone expecting to stand often and long in the water!

X-Act Trout

L°/cm	185	195

X-ACT TROUT SPOON & SPIRO

X-Act Trout Spoon: This fantastic spinning rod was developed especially for using small spoons and soft baits. The extremely slim blank with X4-carbon mesh-reinforced backbone has a parabolic action, which very effectively absorbs even powerful attempts at escape. Fish weighing in at more than two kilograms can be rapidly brought to surrender. And thanks to the featherlight structure, these elegant power packed rods lie perfectly balanced in the hand. Among the top-quality fittings are high quality SIC guides from Seaguide, a slim VSS reel seat and a robust Duplon handle. The ideal choice for long hours of fishing action at the trout stream and elsewhere.

X-Act Trout Spiro: This multi-function rod was specially developed for active fishing for trout in streams with fast retrieve or a more passive technique for bottom lures. The slim, lightweight blank is perfectly loaded and allows for long, precise casts even with long leaders. Thanks to the balanced parabolic action, even long hours of casting are free of fatigue. Then there's the powerful backbone, which can master even large fish with no trouble. There's nothing to match it for any Sbirolino fan!

X-ACT TROUT TREMARELLA

MAKES ALL TROUT TREMBLE.

Shake and catch! These top quality ultra-balanced and super-sensitive rods were developed especially for professional Tremarella fishing in trout waters. The extremely light blank is designed in such a way that it transfers any vibrations from the handle directly from the highly sensitive tip area to the lure. The low weight of the rod makes it easy to fish for a long time. And thanks to the excellent resetting capacity, different Spirlinos can be cast with absolute precision to hit the intended target. The first-class fittings include a slip-resistant grip, robust slide reel seats made of metal, and high-resistance SIC guides, which prevent the wet line from sticking to the blank.

METHOD FEEDER FOR TENCH

By David Kraushaar

1. Your fishing spot

The right water is crucial for successful fishing. Therefore, find out beforehand whether tench have already been caught there. Once you arrive at the 'tench water', open areas in herb fields, water lilies or reed beds are very interesting. Take your time and observe the water. It is not uncommon to spot feeding tench on a carpet of bubbles on the surface. They are most active in the early morning or late evening hours.

2. The bait

Before fishing begins, I distribute a handful of tinned corn at the fishing spot. Less is more here. I use special method feeder bait for the basket as this has better adhesive properties. I like to experiment with the flavour, e.g. one rod fishy, the other fruity/sweet. I have also had very good experiences with hemp flavouring.

3. The method feeder rig

Float fishing for tench is super exciting fishing, but in my opinion, fishing with a self-hooking rig is easier and more efficient, with the bait lying directly in or on the food. Especially with the cautious bites of tench, the false bite rate is lower. When the bite comes, it really gets going straight away. I use a sturdy hook, size 14, and wind the boilie onto a hair rig. I tie the leader to a length of approx. 20cm. Another advantage of a feeder rig is the better casting distance, which means you can also target more distant hotspots. I set the rod tip flat and activate a bite indicator.

4. The bait

Tench love maggots and worms, but unfortunately so do many other fish species. That's why my favourite here is the mini boilie. Maggots and worms are quickly picked up or sucked out by whitefish. The mini boilie remains attractive for longer and can be easily hidden in the food. Here too, there is usually a boilie with a fishy flavour on one rod and a fruity/sweet flavour on the other.

5. The by-catch

Other fish species cannot be completely ruled out, but with the mini boilies it tends to be larger fish. However, these are always welcome. Tench are great fighters that demand everything from the equipment, but I'm also really happy about nice gills, bream or carp.

OUTSTANDING AND UNIQUE RODS FOR NON-PREDATORS:

Rapid Feeder: These exceptional rods, built using Japanese high-modulus carbon, are ideally suited for fishing with lightweight feeders at close and middle distances, in flowing or still water. The high-speed spine makes for first-class casting performance and steers even big fish steadily and surely out of the current. In this series you'll find Rapid Feeder Light, Rapid Feeder Medium, and Rapid Feeder Heavy. A dream for all friends of feeder fishing!

Rapid Feeder XS: This easy-to-fish short version of our popular feeder rod series comes into its own in restricted spaces, especially those with overhanging trees or high bushes. Thanks to the outstanding casting performance of the first-class blank, any feeders can be cast over amazing distances and with real precision – and that's despite the compact length of the rod.

Rapid Feeder Heavy „Distance“: The awesome power of these rods makes short work of long distances. The two completely upgraded models come with the same powerful blank and identical fittings as our Heavy Feeder versions. And for smooth line running without tiresome twists, the slim K-style SIC long-cast guides, with a 40mm first guide, are the perfect answer. From now on, there's a whole lot more in every cast.

Rapid Pellet Feeder: Perfect for light-weight fishing with pellet feeders in flowing and still water. The fast and extremely sensitive blank, made of Japanese high-modulus carbon, allows for long casts and secure strikes. The excellent damping characteristics make it extremely difficult for a fish to escape the hook. Among the top quality fittings are stable SIC guides, a robust DPS reel seat, and the latest EVA handle. In short, everything you need for successful pellet fishing!

OUTSTANDING AND UNIQUE RODS FOR NON-PREDATORS:

Rapid Match: The blank is a winner, with enormous sensitivity and speed in the tip section. That means spot-on accuracy with floats, even over longer distances. The impressive backbone ensures that even strong fish soon meet their match and end up securely in the landing net. The slim SIC guides have sufficient height to prevent wet line from sticking to the blank. And a little tip... the Rapid Match is way out in front for fishing trout streams too.

Rapid Match

L°/cm	360	390
CW°/g	8-20	8-20

Rapid Pellet Waggler: The high-speed blank, made of Japanese high-modulus carbon, produces a progressive, continuous action which helps bring a hooked fish to the bank rapidly and under full control. Thanks to the rapid-reaction tip section, the strike is absolutely reliable, even at long distances. Expect extremely good damping, which prevents fish slipping the hook. The rods come fitted with stable SIC guides, robust DPS reel seats and somewhat shorter EVA rear handles.

Rapid Pellet Waggler

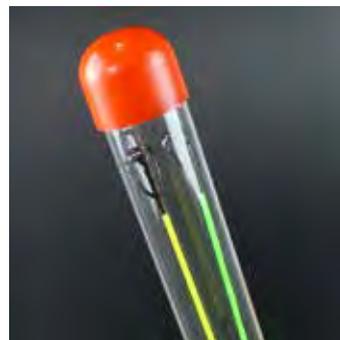

L°/cm	300	330
CW°/g	15-35	15-35

Rapid Multipicker: These slim and fast rods, have been developed for all kinds of fishing. The blank, made of Japanese high-modulus carbon, has extremely good casting characteristics, and enough power in the backbone to make playing the fish exciting and fun. The Rapid Multipicker comes with two complete highly-sensitive tip sections (picker & swing tip), which detect every bite, however slight. Other fittings include slim SIC guides, a stable DPS reel seat and a robust EVA rear handle.

Rapid Multipicker

L°/cm	300
CW°/g	10-30

Rapid Float NT: The slim blank, made of Japanese high-modulus carbon, has a powerful backbone in combination with a fast tip, which makes for first-class casting performance. Not only that, these versatile power-packed rods are also ideally suited for hunting trout with floats or Sbirolinos. Even zander can be targeted with bottom lures or by floatfishing, with excellent results. In short: the perfect companions for anyone who wants to travel light and keep the targets varied.

Rapid Float NT

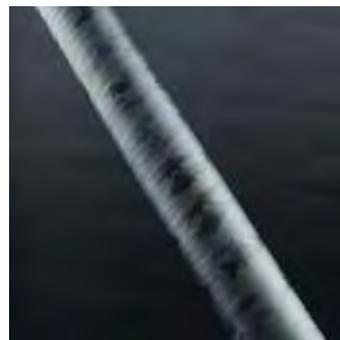

L°/cm	360	390
CW°/g	10-35	10-35

Rapid Stalker: The blank, made of Japanese high-modulus carbon, has excellent damping characteristics for playing the fish. Every cast is superbly cushioned right down to the handle, which makes for first class fun when playing fish. Thanks to its compact format, the Rapid Stalker is also ideally suited for fishing from boats or in confined spaces. The top quality fittings include stable SIC guides, a robust DPS reel seat and a slim EVA rear handle.

XCLUSIVE FEEDER RS-2

TOP PERFORMANCE, TOP FOR STRENGTH.

Xclusive Feeder RS-2: Introducing the XCLUSIVE FEEDER RS-2 series, now equipped with an upgraded Helicore blank crafted from the latest T800-carbon fibres for more speed and durability. The rods are light and well balanced, which makes for very precise and long casts. In particular, the Heavy model now has extra large KW style guides to help push your casts over even further distances. And check out the ergonomic handle shape, which ensures comfortable and secure handling.

Xclusive Feeder RS-2 Light / XS: Designed for light feeder fishing over short and medium distances, these high-quality rods make going after non-predatory fish an absolute pleasure. Whether it's just a gentle nibble or an energetic attack, you won't miss a bite. They are also ideal for fishing with small bait fish for zander. The set includes three sensitive carbon feeder tips in 1.0 / 2.0 / 3.0oz.

Xclusive Feeder RS-2 Medium Light: Ideally suited for light to medium sized feeders over short and medium distances in still and flowing water. The rods perform particularly well when used for roach, bream, tench, and medium-sized carp. The set includes three sensitive carbon feeder tips in 2.0 / 3.0 / 4.0oz.

Xclusive Feeder RS-2 Medium Light

L°/cm	365	395
CW°/g	65-125	65-125

Xclusive Feeder RS-2 Medium / XS: Developed for medium-weight feeder fishing in lakes and rivers, these rods boast high-quality blanks with excellent damping characteristics which minimise the risk of the fish escaping during play. And they have the backbone you need to deliver precise, long casts. The set contains three sensitive carbon feeder tips in 2.0 / 3.0 / 4.0oz.

Xclusive Feeder RS-2 Medium Heavy: These outstandingly good rods make it child's play to bring in big strong barbel as well as carp in still and flowing bodies of water. They are also ideal for eel fishing. Their impressive power is complemented by fine sensitivity, which means you can play smaller non-predatory fish with confidence. And thanks to the blank's high restoring torque, long and precise casts really do come effortlessly. The set contains three sensitive carbon feeder tips in 2.0 / 3.0 / 4.0oz.

XCLUSIVE MATCH XT

THE ULTIMATE FISHING EXPERIENCE!

Discover the epitome of lightweight precision in our match rods, meticulously crafted from premium Japanese high-performance carbon. Sporting an exceptionally slim and swift blank, these rods possess remarkable resilience, enabling you to execute impressively long and accurate casts. The quick and sensitive tip section ensures prompt and dependable hooksets, while the rod's robust backbone empowers you to handle medium-strength fish with confidence. Enhanced by Seaguide's SIC match rings, strategically positioned to prevent line cling, and featuring a reliable FUJI TVS reel seat to fasten the reel securely, these rods are built for practicality.

Xclusive Match XT

L°/cm	360	390	420
CW°/g	5-29	5-29	5-29

XCLUSIVE BARBEL

THE ULTIMATE ROD FOR STRONG FIGHTING BARBEL.

The completely redesigned blank readily meets every challenge that modern barbel fishing can throw at it, including fixed lead attachment and feeder basket applications. With the two tips at 1.75lbs and 2.25lbs, it is fully equipped to tackle still and flowing water alike. Owing to the harmonious semi-parabolic action, the rod always provides enough power to bring strong fish out of the current and under control.

Xclusive Barbel

XCLUSIVE FLOAT XT

READY FOR THE CATCH OF YOUR LIFE?

Enjoy the ultimate fishing experience with our latest Xclusive Float XT series, developed for those demanding anglers who are looking for a rod with maximum acceleration and strength and extraordinary sensitivity. This series of rods is setting new standards in the world of float fishing. The speed of the blank allows for precise casts over enormous distances, which means you can pitch the bait exactly where you want it. The unique acceleration properties mean you can get a fast strike as soon as a fish nibbles, guaranteeing you have precise control when playing. Thanks to its impressive power, this rod can bring even bigger fish onto the scales. As well as their impressive characteristics, the rods in this series also feature a modern eye-catching design.

The high-quality materials and craftsmanship deliver exquisite handling and good looks. Regardless of whether you're an experienced angler or just starting out on your fishing career, these float rods will be all the inspiration you need.

WONDER WEAPONS FOR CATFISH HUNTERS.

TOP Cat Spin: These super dynamic lightweight rods are ideally suited for successfully chasing catfish with a whole range of lures, including wobblers, blinkers and soft baits. Thanks to the excellent loading and recovery characteristics of the robust Japanese high-performance carbon blank, long, precise casts become child's play. The handle section has been reinforced with a special carbon mesh fabric, giving the angler plenty of power to play really exceptional fish and keep control at all times. Also featured are top-quality SIC K-style long-cast guides in an anti-tangle configuration, which guarantee a flawless run of the line during casting. A top choice for chasing catfish!

TOP Cat Vertical: Perfectly suited for the use of fireballs, clonk teasers and other tackle, these special catfish rods are designed for vertical fishing. The extremely sensitive blank, made of Japanese high-performance carbon, holds the bait precisely in position for Wels catfish to suck it in with no effort. The special design of the tip section allows for continuous action, and reliably conveys even the gentlest take right down to the handle. The fast and powerful backbone, with its special carbon mesh fabric, allows for a powerful lift, and rapidly takes the fight out of the fish when it is being played. The two 'standard' models come fitted with robust guides, and can be used optionally with multiplier and fixed spool reels. An Inline version with a multiplier reel seat is available too, which, due to the absence of guides and the line running inside the blank, curves noticeably more effectively under load. And that means even more enjoyment when it comes to playing the fish. Simply the BEST!

TOP Cat Boat: Any angler who likes fishing for catfish from a boat will love this rod. The sensitive action of the tip section does all the work when it comes to bait presentation and bite recognition. Regardless of whether you prefer to drift to where the action is or anchor on a hot spot, with the TOP Cat Boat the right tool is always in your hands. To bring the fish under control as fast as possible after the strike, the rod has an extremely strong backbone with progressive strength distribution, reinforced by a unique carbon mesh fabric. No specimen fish is going to get away from this rod in a hurry! And thanks to the special boat guides, both multiplier and fixed spool reels can be used. Putting it simply, this is how to handle catfish!

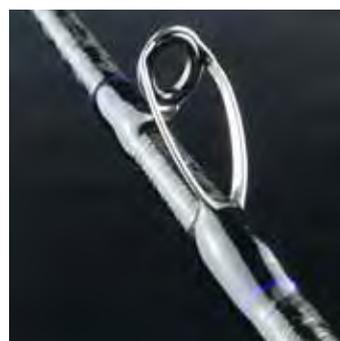

TOP Cat Boje: This specialist catfish rod series is made of Japanese high-performance carbon for buoy and stationary fishing in still and flowing water. Thanks to the special action and guide arrangement, the line can be held under tension out of the water with exactly the result intended. When a bite comes, there is direct contact with the fish, and that means a perfect strike. Even in water where obstacles are a real problem, there are no compromises with the TOP Cat Boje. Thanks to massive reinforcement using a special carbon mesh fabric, the backbone builds up enormous pressure very rapidly and stops the catfish being able to settle. The rod can be fitted optionally with multiplier reels or fixed spool reels. Anyone fishing with this tackle really will get a grip on any catfish.

POWER RODS FOR CHASING CATFISH!

Catfire CS-2 Vertical:

Developed especially for vertical fishing for catfish from a boat, this is a rod with the power to bring fish to the surface quickly and consistently. The sensitive tip reliably detects even a hesitant nibble and allows the catfish to suck in the bait without resistance. Thanks to its light weight, the rod sits easily in the hand, meaning comfortable fishing over lengthy periods of time.

Catfire CS-2 Boat:

Tailor-made for drift fishing from a boat. This rod is bound to impress, with a sensitive but tough tip that allows for precise bait presentation under water. The reinforced backbone ensures a secure strike and full control during playing. The improved damping properties of the blank also noticeably contribute to fewer getaways.

Catfire CS-2 Spin:

These are tough and fast rods created to land catfish with lures. With a taut backbone for heavy loading, you can make precise long casts and know you have the support you need to bring the fish to the surface under total control.

Catfire CS-2 Boat Float:

A lightweight but very tough rod for trolling natural bait with a float behind the boat. The blank has impressive shock absorbing properties and a strong backbone, which, if required, prevents the fish from becoming snagged in an obstacle. The Boat Float provides a real adrenalin kick when catching catfish big and small.

Catfire CS-2 Feeder:

Presenting the new generation of the much beloved catfish feeder rod, which we have developed in conjunction with our catfish expert, Jens Köller, especially for bottom fishing with natural baits and pellets. In order to achieve even more power and impressive casting distances, we have added more reinforcement to the backbone of the rods. This improvement gives the rods even more speed strength. We have also reviewed the two changeover tips: The Medium-Heavy tip section, for use in stillwater, and the Heavy tip section, which was developed for use strong currents – both now also have added speed strength giving you the perfect solution for every situation.

Catfire CS-2 Lure Boat:

Discover our unbelievably versatile Lure Boat rod. Regardless of whether you want to fish from a boat, belly-boat, or kayak, or whether you opt for the banks of small rivers, canals or lakes, the Lure Boat can be used for a whole range of different techniques. It is best suited for use with blinkers, crankbaits, soft plastic baits and jigs. It can reach longer distances too, as well as being suitable for vertical fishing (such as for pelagic fish with a clonk teaser in combination with worms).

Catfire CS-2 Boje:

Experience the ultimate in float fishing in rivers and lakes with our special Catfire Boje float model. With its impressive length of up to 3.30 metres and its taut action, it allows for effortless casting of the line over long distances, without disturbing the surface of the water. It means for any bite you'll have a rapid and direct contact with the fish. The sensitive tip reliably conveys every nibble to the rod, while the strong backbone ensures that the hook is placed perfectly at the strike, and you can then bring the fish steadily and rapidly onto land or into the boat. If you prefer fishing from an anchored boat, our 2.70 metre version is the ideal choice. It offers you the optimum length and flexibility to maximise your chances of a catch.

Catfire Transform 3-pcs.:

A real all-rounder, which will enthral every modern catfish angler. Thanks to its innovative design, this revolutionary catfish rod can be used in two or three parts. For example, you can combine all three parts, and use an impressive length of 3.20 metres from the bank. On the other hand, you can also use it as a two-part boat rod, at 2.70 metres long and ideal for use in open water. This rod offers you an incredible amount of practicality and flexibility on the water – take advantage!

D-Hook hook keeper

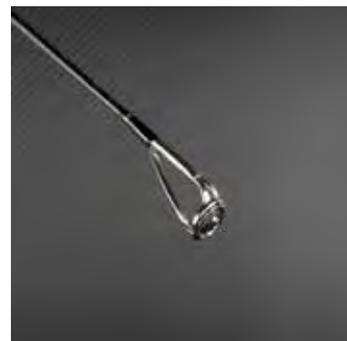

Cross Gimbal

OUR PREMIUM ROD SERIES FOR WARM WATER FISHING.

In this extensive series, everyone should find their favourite rod for fishing in the world's oceans. Our rods are specially designed for discerning anglers who value the highest quality, reliability and optimum performance. Whether you are an experienced professional or an enthusiastic amateur angler, the Magnus Mastergrade series offers the perfect combination of state-of-the-art technology, the best materials and attractive design to take your fishing experience to a new level. We have used only the highest quality materials for the entire Magnus Mastergrade series:

- Lightweight and powerful Helicore blank made from high-performance carbon for optimum sensitivity and robustness
- FUJI Stainless KW SIC guides for long-lasting performance and reduced friction. Specially protected against corrosion from salt water!
- FUJI quality DPS or TCS reel seat for a secure hold of the reel
- High-quality, saltwater-resistant Duplon handle with logo 'branding' for maximum comfort and grip
- Rubber gimbal with cross end for stability and easy handling
- SEAGUIDE D-Hook hook holder for easy and secure hook attachment

Mastergrade GT Popper:

The rod series for targeting Giant Trevally (GT) with heavy poppers offers outstanding performance and reliability. The rods have a robust tip, which is crucial for effectively guiding and animating large poppers. They also enable long casts with ease. Thanks to the special construction, the MASTERGRADE GT POPPER offers a powerful and consistent action under load. These rods are also characterised by their excellent spinning properties, which enable even large GTs to be landed safely and in a controlled manner.

Mastergrade Tuna Spin:

Specially developed for tuna fishing. The specially robust blank design enables precise casting of a wide variety of lures, such as metal jigs, and ensures a fast and penetrating strike. The handle section lies comfortably in the hand even when the fish are fighting hard and ensures secure control over every fish that moves into the depths. Thanks to the special uptide division, the MASTERGRADE TUNA SPIN always offers reliable performance, even under extreme conditions.

Mastergrade Shore Jig & Cast:

Specially developed shore jig & cast rod that is perfect for fishing from the bank for giant mackerel, Spanish mackerel, tuna as well as pollack, coalfish, cod ect. in the 2-8 kg range. The fast blank with its strong backbone gives the rods unrivalled dynamics and casting distance, which are indispensable when fishing from the bank. The action of the tip section of the rod has been specially adapted to the needs of shore jigging lures, which enables perfect lure control. Even the finest movements and bites are transmitted precisely to the handle area, which increases the chances of success when fishing. The rods also demonstrate their skills during the fight with their excellent damping properties and rarely let the fish off the hook.

Mastergrade Travel:

Short-sectioned (5-piece) sea spinning rod that can be fished in two different lengths.

The innovative blank offers an excellent balance between sensitivity and robustness, perfect for a variety of fishing techniques and fish species. The rod enables long, precise casts, ideal lure control and secure control of the fish during the fight. If the penultimate section is removed, the 3.00 metre version can be fished at a length of 2.40 metres. This combines two different lengths in one rod. This rod combines compact design with outstanding performance to give you unforgettable fishing experiences anywhere in the world.

Mastergrade Jigging:

The MASTERGRADE JIGGING rod series combines state-of-the-art technology with a sensitive tip and an extremely resilient backbone. Despite its robustness, the slim and lightweight blank is designed for fatigue-free fishing all day long. The finely tuned tip action ensures an excellent lure feel and enables a natural presentation in the water.

Thanks to the special uptide division of the blank, the rods offer a continuous action that utilises the full power of the blank without interruption when fighting a large fish. The light models (100 g / 150 g) are ideal for light to medium speed jigging, while the heavier versions (200 g / 250 g) are perfect for large rubber lures or medium natural baits.

This series also includes two jigging models with spiral guides (SJ1920 / SJ1930) which maximise the power transmission and at the same time optimise the course of the line on the blank.

MUCH MORE THAN JUST A SEA ROD.

Boat: Maximum power and flexibility on board! For decades the Magnus Seamaster Boat series has stood for ultimate reliability and enjoyment. Our innovative new format, with its top quality fittings, now goes a step beyond. Regardless of whether we're talking natural bait fishing for redfish, ling and tusk, or lure angling for halibut, the powerful blank can take on any fish in the sea. The top-of-the-range fittings

include special boat SIC guides, robust Seaguide reel seats and high quality Duplon handles in a stylish camo format. As well as this, all the models feature a cross-gimbal design from Pac-Bay, protected by an EVA closure cap. Thanks to the special boat rod guide arrangement, we recommend the use of a multiplier reel. For all stationary-bait fans, the MB2132 is a model with something really extra, with rod guides to match.

Jigging: Make light work of heavy duty spin fishing. This unique series of rods was developed for going after pollack, wolffish, cod, ling and halibut. All the models have sensitive tip actions, which allows for controlled lure guidance with intensive bite detection. This allows for a natural presentation in all layers of the water column. The 20lb version is perfectly set up to fish different lures or natural bait rigs of up to 300g in shallow water up to 50 metres deep. For anyone wanting to use lightweight pilker lures and natural lures up to 500g in medium

depths at around the 100 metre mark, the universal 30lb model is the best choice. The 50lb models have been developed for heavy natural bait fishing for ling or rock fish, or XXL lure fishing in strong currents or drifting in depths of up to 300 metres. The Magnus Seamaster jigging rods are fitted with a cross-gimbal from Pac-Bay, including an EVA closure cap. Because of the special lowrider guide arrangement, we recommend a multiplier reel. For those who prefer stationary-bait fishing, the best bet is to go for the 30lb MB2221 model, which was designed specifically for this purpose.

Slow Jig: Fish playing... in the best possible way. Anyone looking for a robust and reliable spinning rod for effective vertical fishing with lures weighing up to 80g or 120g will really be inspired by our Magnus Seamaster Slow Jig models. The lures

can be guided slowly or with rapid, drawing movements, whichever you want. In such situations, the highly-elastic blank really does its job even when big fish are on the line.

Spin: A fast all-rounder right from the start. These versatile spinning rods were developed especially for lure angling for halibut, cod, pollack and similar species. And of course, the compact power package is also ideally suited for lightweight pilker lures

weighing up to 160g fished from the boat, with little drift and a maximum fishing depth of 50 metres. Even herring and mackerel paternosters can be used effectively with our Magnus Seamaster spin models.

Travel (Boat / Jigging / Spin): Mega power in a mini format. Our practical short-section Magnus Seamaster Travel models are available as boat, jigging and spin versions, in different lengths, and can be stowed in ordinary luggage with no problem at all. All the rods have an almost identical action to their two-part counterparts, and produce the same top performance on the water. And of course they come delivered in a super-strong transport tube.

Dimensions transportation tube:

- 3-piece / Jigging / approx. 81cm
- 4-piece / Boat & Jigging / approx. 74cm
- 4-piece / Spin 245 cm / approx. 79cm
- 4-piece / Spin 275 cm / approx. 86cm

SYNORIS FLY

WE CALLED ON 12 YEARS OF EXPERIENCE AND EXPERTISE IN THESE RODS.

Proprietary Helicore technology from Sportex fuses state-of-the-art T1000 carbon fibres with a resin enriched by nano particles to create a highly-responsive, well-balanced and powerful blank.

Synoris Fly Rods effortlessly and accurately cast extreme distances -beyond the limits of other fly rods - yet giving the firm assurance that this rod still has plenty more to come. They are excellent for overhead, roll and switch casting, and will deliver dry flies as perfectly as nymphs and streamers. They will also make the toughest of strikes and play the biggest fish with ease. The exclusive blank design features a matt finish in silver-grey and is enhanced with an extra light-weight aluminium reel seat with carbon-inlay. Hard-chromed snake guides, convenient marks to align the rod sections and a classy cork handle complete the impressive aesthetics on this premium rod series.

KYANITE FLY

THE IDEAL ROD FOR AMBITIOUS FLY FISHERMEN.

The superlight HM carbon blank is created with all the quality and precision associated with the Sportex brand. It performs with absolute harmony, is forgiving of mistakes but also powerful – and can surprise even the most seasoned caster. Whether overhead casting, switch casting or roll casting, Kyanite Fly rods create extra tight loops that are equally targeted and precise. In the lower line weights, the rods are perfectly adjusted to the fine-tuned requirements of delicate fishing with dry flies and nymphs, while the more powerful models love heavy streamers and relish tackling bigger pike, asp and sea trout. The Kyanite is an absolute joy to use and has the scope to do so much more than other rods in the same class. The matt green blank comes with perfectly matched snake guides, a very light aluminium reel seat with wood inlay and a high quality cork handle.

Three well-lined inner sections. A real safe for your valuable rods. With Rucksack function. Length: 165 cm.

Rod bag with 2 trays for 2-4 rigged rods

The SUPER SAFE Multi-talent with 2 trays for ready rigged telescopic or standard rods. Long outside bag for net, umbrella, etc... and 2 extra tool Bags. With Rucksack function. From 150 cm up to 190 cm.

The perfect SUPER-SAFE rod tube

It is part of an angler's basic equipment. You cannot protect your rod in a better way. From 150cm up to 165cm.

SUPER-SAFE rod tube for one rigged rod

The SUPER SAFE lining is padded on the inside. An integrated, special reel box facilitates the insertion of the complete assembled rod. At home, simply hang your assembled equipment by the hooks. Perfect! From 125 cm up to 165 cm. With Rucksack function.

SUPER-SAFE hard shell bag for Carp Rods 12" & 13"

A high-end bag for your carp rods, especially designed for best possible protection of rods and reels. Both separated rod-compartments, with embedded shock resistant inner-shell, offer enough space for one rod with reel each. Inside, the bag is very well padded and each rod can be individually fixed to allow best possible protection of your rods. Even size #50 guides and large big pit reels are no problem. A long extra side pocket offers enough space for an umbrella, landing net or bank sticks. Two additional side bags are available for your accessories.

Single sleeve for Carp Rods 12" & 13"

Our single sleeves in 12' and 13' for the safe transport of single, mounted rods. The durable outer material as well as the strong inner padding allow for an excellent protection of your rods. The reel-part was especially designed for large big pit reels. Obviously, rods with size #50 guides fit in comfortably as well. Using the karabiner at the side, several sleeves can be connected.

SUPER-SAFE Baitcast rod tube for an assembled rod

This Super-safe rod tube for an assembled bait-cast rod is the ideal choice when you need to protect a single-piece rod and reel from impact damage. The length of 2.10 m will accommodate most conventional bait cast rods.

Spinning Bags

The perfect bags for the most avid lure anglers. A high quality PVC finish, amply dimensioned overlaps and waterproof zippers reliably protect the interior from moisture in all weather conditions. The premium bag easily holds two extra-large lure boxes and offers separate pockets to tidy stow pliers, hook removal or any other accessory. The basic version (no side pockets) features a mesh pocket in front and a Velcro-strip flap for fast and easy access.

Carryall Bags

SPORTEX has designed these top-quality Carryall bags for use in all weathers. A special PVC surface material, waterproof zip fasteners and waterproof base shell make them the ideal choice for protecting your fishing accessories against the wet. Carryall Bags have a spacious, padded interior compartment and three additional outside pockets.

A padded carrying strap and two EVA carrying handles on the side make light work of carrying the bag, even when it's full.

Duffel Bag

Four additional pockets, which can be attached in any combination using the click system, enable the angler to quickly and easily adapt to the particular situation on the water. Made from highly resilient TPU material, the duffel bag is very resistant to wear, kink and tear. The material is also waterproof and weatherproof. Available in two sizes (M and L), the duffel bag comes as a basic version without the additional pockets or as a full version including the expandable pockets. The shoulder straps can be stowed away in a back pocket and additional handles quickly transform the duffel bag into a travel bag for leisure.
